

DIRECTIONS

Vegetables and Flowers: Mix 3 tablespoons per gallon of water. Pour around plants and water into soil. Repeat every 3-4 weeks during growing season.

Indoor Plants: Use 1 tablespoon per quart of water. Apply to soil every watering.

Lawns: Use 1 pint per 1000 sq. ft. Apply with water to soak into soil.

Trees: When planting, mix 2 tablespoons per gallon of water. Place root ball in hole and pour on solution. Cover plant, apply solution again, water thoroughly. Use 2 tablespoons HuMate per 1" diameter of tree, mix with water, thoroughly soak root area.

Seeds: Soak planting seeds in teaspoon per quart of water or until seed skin is penetrated, plant immediately.

NOTE: For best results, use HuMate Liquid Humus as part of an overall fertilization program. The amount of plant foods and frequency of application can be reduced because HuMate activates the soil and root system and allows the plant to absorb nutrients more efficiently. Add HuMate at a rate of 1 cup per gallon of liquid fertilizer.

ABOUT LIQUID HUMUS

The term "humus" dates back to the time of the Romans to designate the whole soil. Most often it is considered as a complex, formed in soils, bogs or composts by a special process of "humification."

Benefits are:

- Builds a stronger root system
- Increases nutrient and water uptake
- Encourages natural processes in the soil
- Helps plants produce more abundant foliage, flowers and fruit.

CAUTION

Shake well before using. Keep this and other products out of children's reach. Harmful if swallowed. Avoid contact with eyes and open sores. Wash hands after using.
