

HERB & VEGETABLE COMPANION PLANTING CHART

Select the crop you want to grow in the first column. The plants in the second column are companion plants that benefit from being grown together. The plants in the third column are considered incompatible and should not be grown directly next to the original desired “crop” plant. You would not want to plant them together in containers. You can, however, plant in the incompatible plant in another part of the garden or different containers.

For more information regarding companion planting visit attra.ncat.org

	✔	✘
